

Version 33 - Twitch in the shell

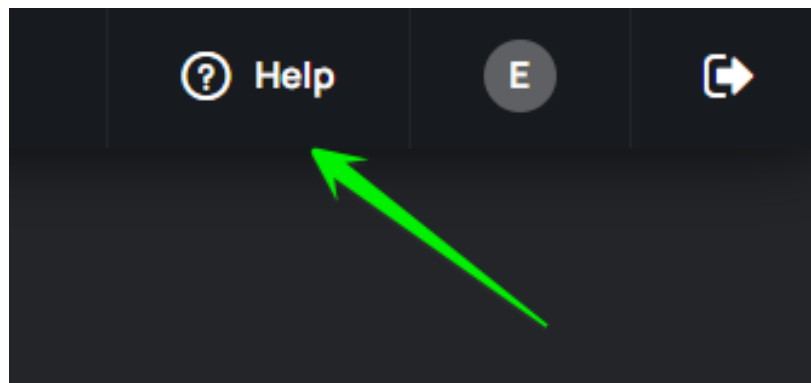

CAP (Club administrative panel)

1. Analyze the club load with new notifications.

During creating/canceling a booking on an external portal, notifications about this will be sent to the admin panel. They will contain information about the type of operation: a booking creating or it's canceling, the PC number that was booked or on which the booking was canceled by the client, the date, time and period of the booking. These notifications will help you to assess the current and future club load.

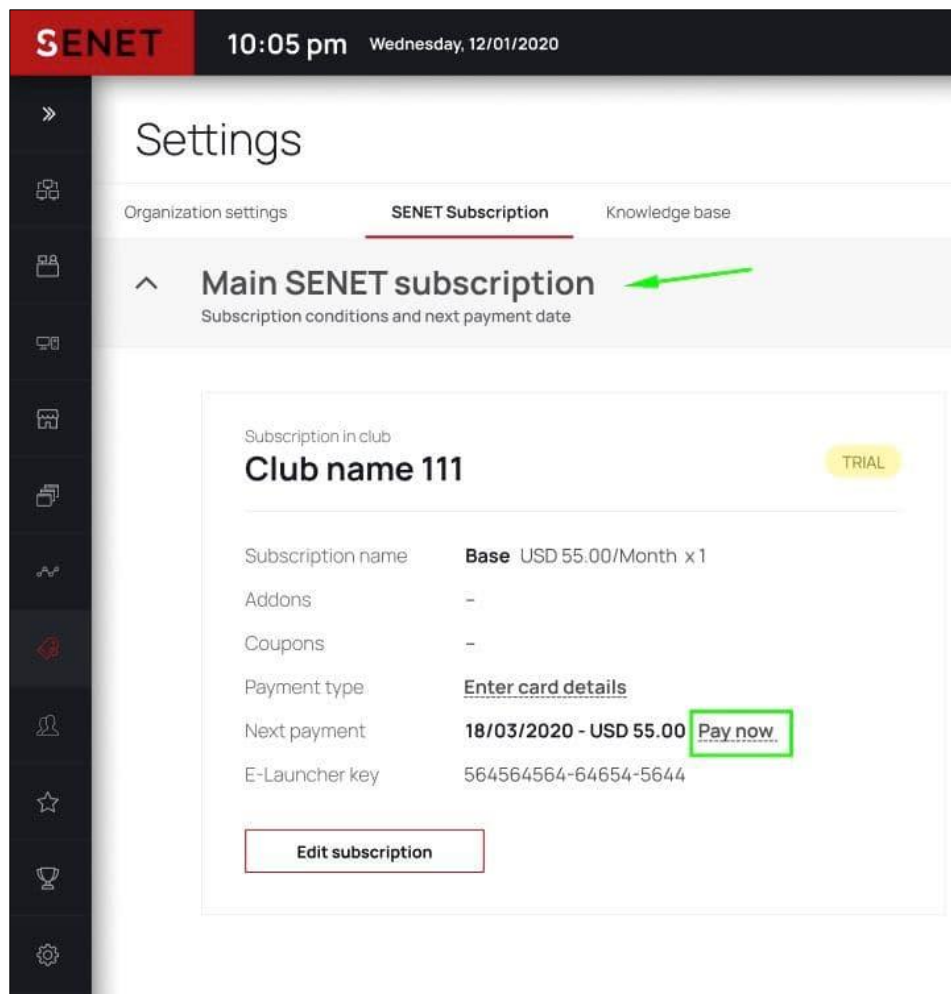

2. The Senet knowledge base will always be close at hand.

Now, you can also open the Senet knowledge base from the header in the admin panel.

3. Pay for Senet subscription just by clicking on the "Pay now" button.

Being on the trial period, you can pay for the subscription before the trial ends. Go to the "Settings" section and open the "Senet Subscription" tab. Then click on the "Pay now" button, after which your invoice will generate and your subscription will be activated.

SHELL

1. Twitch broadcasts are now available in the shell.

The twitch platform is now added to the client's part. In the shell, clients of your club will be able to watch streams of video games, e-sports tournaments and communicate with other players, which will allow them to get a new experience in playing games and a lot of vivid impressions. The Twitch widget allows you to select different channels for watching. Each channel will show the name of the broadcast and the discipline, the channel icon, the number of views. If the broadcast is in live mode, this information will also be displayed.

In order to add your Twitch channel, please contact our support team.

2. Save money on SMS-service with a new process of registration by phone number.

The new process of registration of users' accounts by phone number works as follows: when the user enters a phone number and clicks the "Next" button, the system automatically checks whether there is an account, already registered on this phone number, or not.

- 1) If there is no account, then an SMS with a confirmation code will be sent to it`s number. The client enters the code in the appropriate field and, if the code is entered correctly, a window for account creating opens.
- 2) If the account exists, there will be an opportunity to enter the current account or change the phone number.

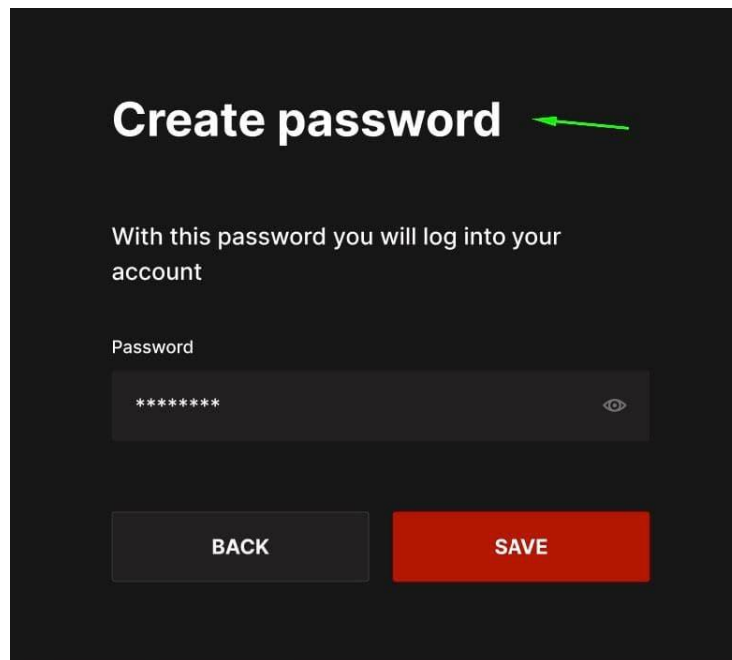

- If the user selects "Login to account" he will need to enter the password of his account.
- If the user decides to change the phone number, then he needs to enter a new phone number in the appropriate field. After that, an SMS with a new code will be sent to the specified number, and after confirming it, the user creates the new account.

If the user clicks on "Forgot password", the system will provide one of two options for further actions, which depend on the club's settings:

1) contact the administrator to reset the password. This option is configured by default. The club employee resets the password in the admin panel, the new password will be sent to the phone number and then the user enters it in the appropriate field.

After password entering, the system will suggest user create a new password for his account.

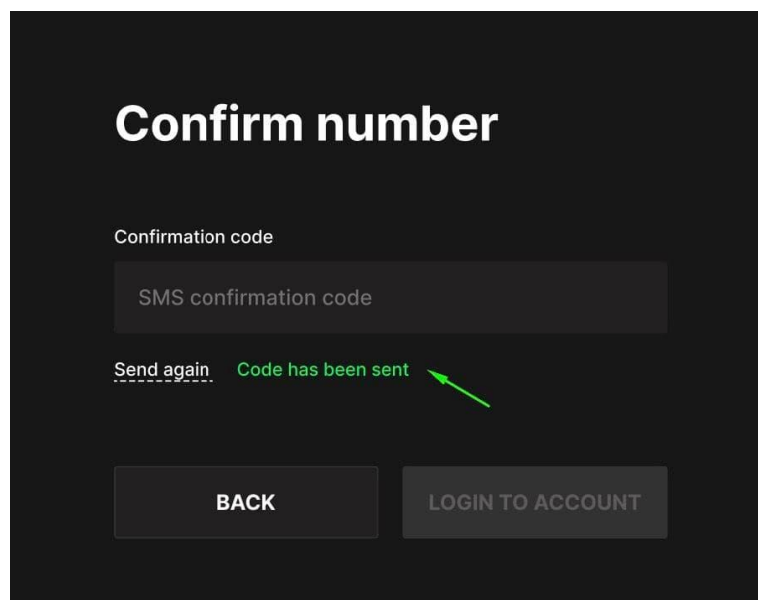

Create password

With this password you will log into your account

Password

BACK SAVE

2) confirmation of the phone number. To enable this option please contact our support team. In this case, a confirmation code will be sent to the phone number. After entering the code correctly, the user can log in to the account. Then the system will also suggest the user create a new password for his account.

Confirm number

Confirmation code

SMS confirmation code

Send again Code has been sent

BACK LOGIN TO ACCOUNT

The new process of registration by phone number will motivate users to remember passwords of their accounts and not reset them several times, because if the client forgot his password, he will need to contact the administrator to reset it (if the club wants to do this via SMS). Thus, the amount of sent SMS will be significantly fewer, which will reduce the club's expenses for the SMS-service.

3. Hiding the balance history in the shell.

It's possible to hide the user's balance history in the shell. To configure this option, you need to contact our support team.

BUG FIXES

1. Fixed a bug with incorrect displaying of tickets. Thus, in the shell in clubs where UTC +2 is selected, the list of tickets, available for purchase on Monday from 00:01 to 01:59, is displayed reflecting the time.
2. Fixed a situation when the "Games and Apps" tab was not displayed in the shell.
