# Version 56 - Dark mode of the admin panel

Date: 24.11.21.

NEW FEATURES

1. The new color design of CAP

Got bored with the default color theme of the admin panel? Turn on the dark mode using the switcher in the CAP top menu.

The new color design not only improves the visual perception of the admin panel interface, but also reduces eye strain during work at night.

### 2. Reservation notifications disabling

Now it's possible to turn off notifications, sent to clients after reservation creation. SMS with reservation confirmation will not be sent to clients, so it will help LAN centers to reduce costs on the SMS service.

It's possible to turn off notifications by contacting our technical support chat.

IMPROVEMENTS

1. The cashdesk data filter in the Cashier shifts tab

The cashdesk data filter has been added to the *Cashier shifts* tab. Using it, you can view the dynamics of cashier shifts and their revenue separately for the specific cashdesk.

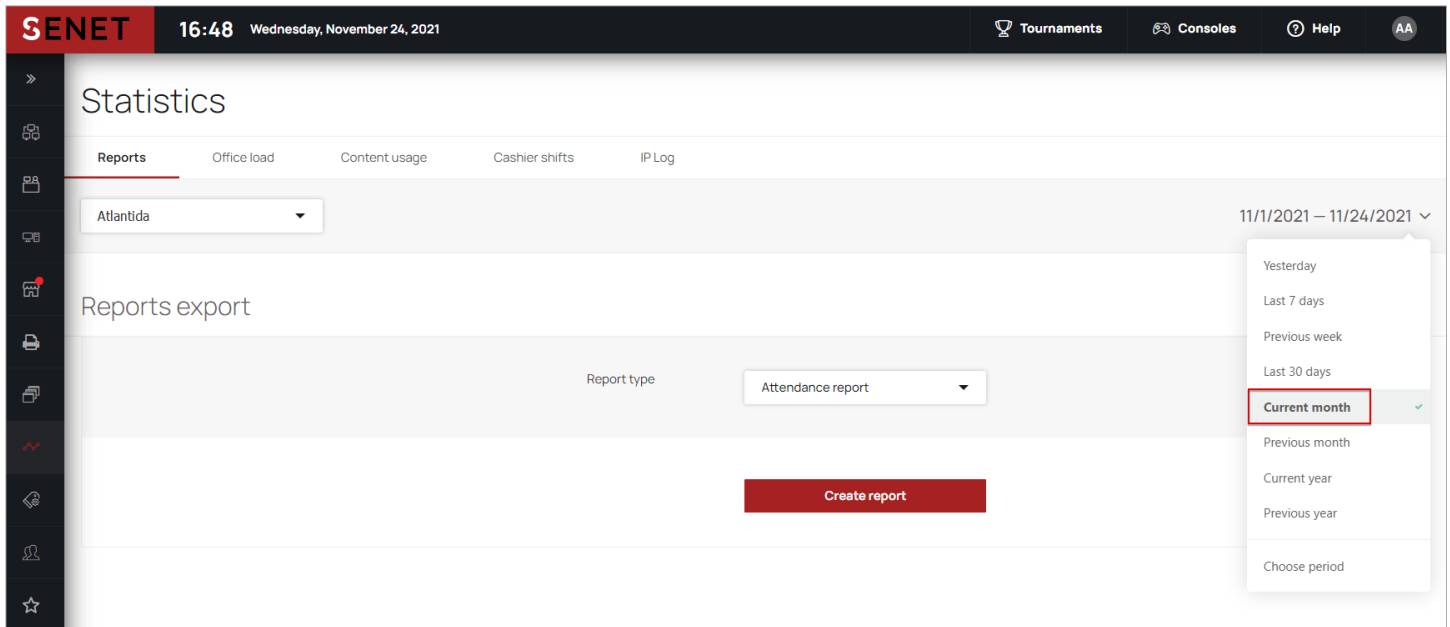

2. The current month data filter in CAP

To analyze the current work of the LAN center, we added the ability to filter statistic information for the current month in such sections as **Users**, **Statistics**, **Content**, **Shop**. Using the new parameter, you can also generate reports for this period.

3. Redesign of the modal window for creating/editing a zone

The updated modal window for creating/editing the zone now looks like this:

BUG FIXES

1. Fixed the subscription description for the Basic tariff plan.
2. Fixed the situation, when send notification command was not displayed on the office map after selecting two or more PCs.
3. Fixed the error, that was displayed when trying to generate office load by zones report.
4. Fixed the situation, when it was possible to change the check status through the devtool.
5. Fixed the bug when the client shell background was not displayed in gaming centers with disabled ads.
