

# Version 34 - Adding categories of goods and services in CAP

## NEW FEATURES

### 1. *The remote control option has become paid.*

The remote control option will be available only after purchasing this module. You can buy it in the subscription menu in the organization settings section. If this option wasn't purchased, then when you click on the "PC remote control" command, a message will appear on the club map, stating that the action will be available after payment.

## IMPROVEMENTS

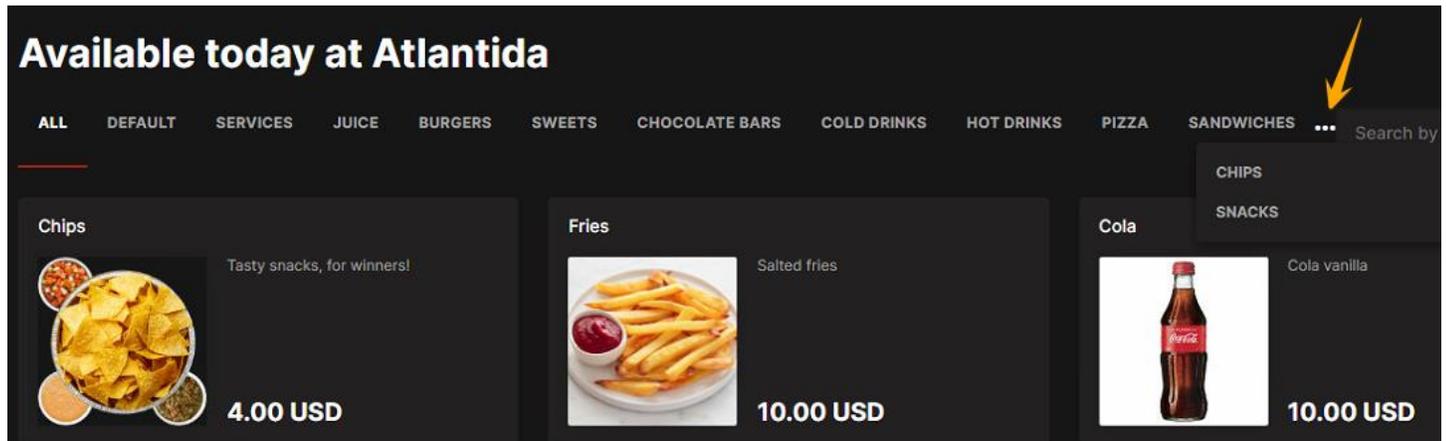

### 1. *Now you can add categories of goods and services in the admin panel.*

A new "Settings" tab has been added to the "Shop" section in the admin panel, where you can add new categories of goods and services, as well as edit and delete existing ones. You can add and delete new categories only on the tab, where the default language is selected. You can delete only those categories, to which goods and services are not tied. Also, you can set the displaying of categories in the shell. If the displaying of a certain category is disabled, then the goods/services that are tied to this category, will not be visible in the client's part.

Category 2	<input type="text" value="Services"/>	<input checked="" type="checkbox"/> Show category in Shell	<a href="#">Delete</a>
Category 3	<input type="text" value="Juice"/>	<input checked="" type="checkbox"/> Show category in Shell	<a href="#">Delete</a>
Category 4	<input type="text" value="Burgers"/>	<input checked="" type="checkbox"/> Show category in Shell	<a href="#">Delete</a>
Category 5	<input type="text" value="Sweets"/>	<input checked="" type="checkbox"/> Show category in Shell	<a href="#">Delete</a>

[+ Add category](#)

In situations, when all categories do not fit in one row in the client's part, for a more convenient displaying, three dots will appear, hovering over them a drop-down list with the rest of the categories will open.

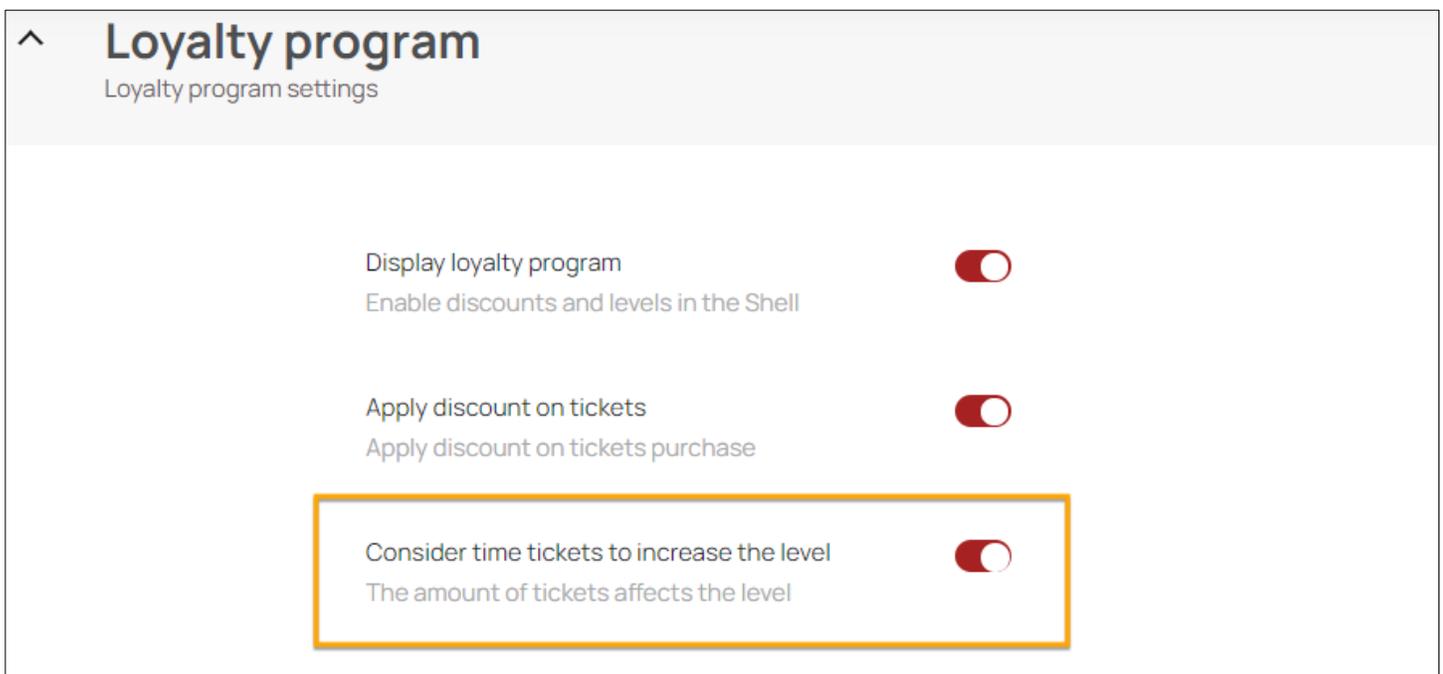

### ***2. Pay attention to orders from the shell in time, using sound notifications.***

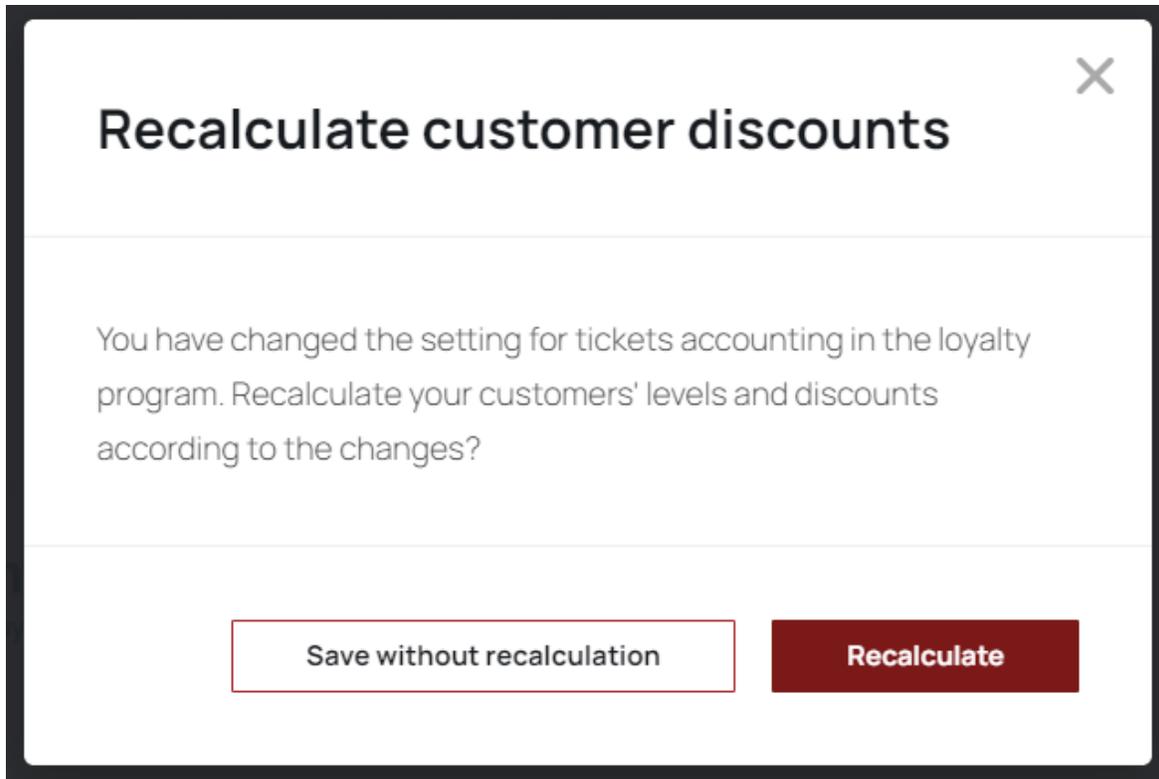

Now it's possible to configure sound notifications, which will be sent to the admin panel during orders' creating in the Shop Shell. This will help club employees avoid losing orders and react to them faster. To set this option up, please contact our support team.

### ***3. Set up the option of tickets' accounting for the loyalty program on your own.***

A new parameter "Consider time tickets to increase the level" has been added to the organization's settings, in which you can specify whether the ticket's purchasing will be taken into account for the loyalty program or not.

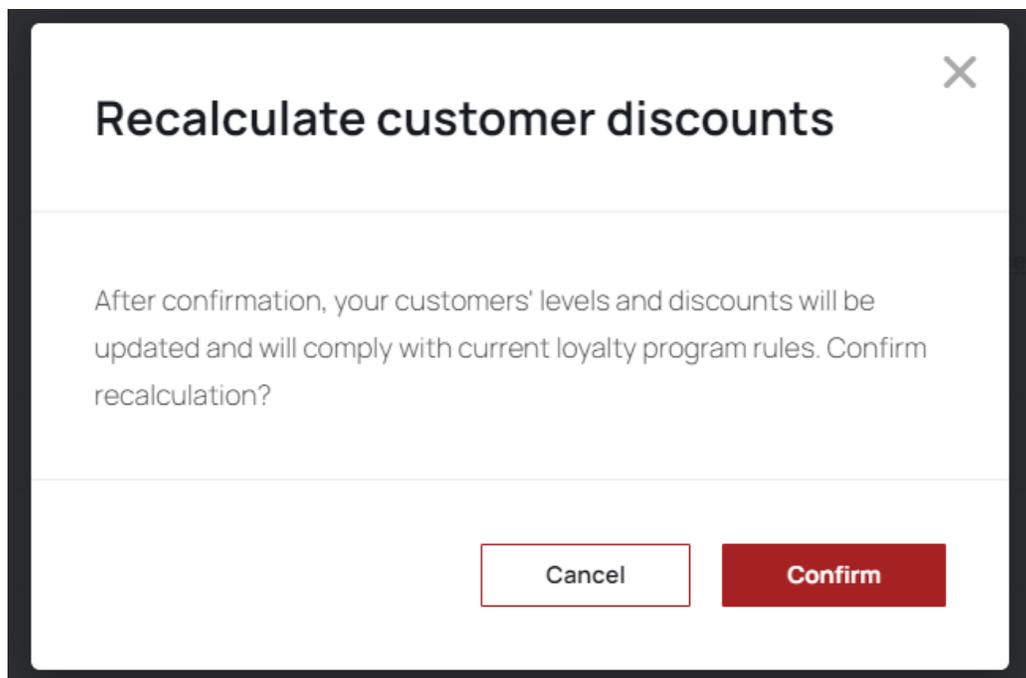

If the parameter was modified, then after saving the settings, a window will open with a question regarding the recalculation of discounts for all users. Choosing recalculation of the loyalty program, the level, and user discounts will be updated automatically. If you choose saving without recalculation, the user discounts will not be updated, but the organization settings will be saved.

***4. The recalculation of discounts for the loyalty program is now possible in the admin panel.***

If you have made changes in the loyalty program settings, you no longer need to contact our support team to recalculate levels and user discounts. This can be done simply by clicking on the "Recalculate customer discounts" button.

Experience	Discount (%)		
8000	9		
5000	7		
3000	5		

## BUG FIXES

1. Fixed a bug, when translations of content sections were displayed incorrectly in the client's part.
2. Fixed a situation, when there was no possibility to create a new password after entering the shell. Now, in clubs where registration by phone number is set up, after resetting the player's password or after entering the phone confirmation code, entering the shell a window will appear, where the player can specify a new password for his account.
